Hello,

Thank-you for visiting our website and for your interest in our system which gives you even more chance of picking the right numbers.

Here is our guide to the 4 best ways to make a first pick of your numbers on the Powerball or Mega Millions grids.

If you use our system in addition to these 4 tricks your chances are really going to totally change !

How to better chose your numbers

The winning numbers drawn depend entirely on chance. And the randomness of chance is the only code on Earth which cannot be broken !

So you have to be cunning to increase your chances of finding the magic numbers !

Our system is probably one of the only methods which brings you closer to the goal : finding the right 5 numbers !

Regardless if you are not already using our system, here are 4 good ways for picking your numbers in a rational way.

Our 4 best rules for choosing the numbers

1. The even or odd rule

Numbers are either even or odd, evenly distributed, and so you only have 6 options for the results.

5 even numbers
4 even and 1 odd
3 even and 2 odd
5 odd numbers
4 odd and 1 even
3 odd and 2 even

For example, 5-10-17-38-51 (3 odd and 2 even)

The results in red come up most frequently; you can then start by selecting 3 even and 2 odd numbers, for example. If you play on many grids a range of all possible combinations (or one part) is worth considering.

2. Identical endings

You might have noticed during the draw that certain numbers have the same ending, the same last number.

For example, 6-8-27-33-37. There we having an ending with 7

Identical endings are common and so it is beneficial to regularly make up grids with identical endings.

3. Numbers from the same row.

We call numbers from the same row those which only belong to the units (from 1 to 9) or to the tens (10 to 19) etc.

So numbers like, for example, 6-12-31-35-49 are very common. Here 31 and 35 are both in the same row.

When making up your grid a good way to do it is to use numbers which come from the same row.

4. The number chosen during the last draw

Another frequent phenomenon is the recurrence of a number chosen from one draw to the next.

A number picked during the draw on Tuesday will also be picked on Friday. It's remarkable enough to be used regularly.

If you play on 5 grids you can use the number from the last draw in all of them, for example.

These 4 tips for making a wise first choice of your numbers are not to be ignored, but they also don't significantly improved your chance.

You will however greatly improve your chances of picking the right numbers by using our System which gives you as much as double the chance of picking the winning numbers, all by using our advice on the choice of numbers.

Do not forget that our first objective, before the jackpot which is our main goal, is first off to win with 5 numbers. This is easier to do and can deliver as much as one million dollars !

**Our system is available for a reasonable price and the benefit that it offers could be worth millions of dollars !
Is it a good buy ? It's worth thinking about...**
